

**Proposition R.231:** Prove that  $A = \{m + n\sqrt{3} \mid m, n \in \mathbb{Z}\}$  is closed under multiplication.

**Proof:** Let  $A = \{m + n\sqrt{3} \mid m, n \in \mathbb{Z}\}$ , and let  $m + n\sqrt{3}$  and  $p + q\sqrt{3}$  be elements of  $A$ . Then

$$\begin{aligned}(m + n\sqrt{3})(p + q\sqrt{3}) &= mp + mq\sqrt{3} + np\sqrt{3} + 3qn \\ &= (mp + 3qn) + (mq + np)\sqrt{3}.\end{aligned}$$

Since  $m, n, p, q \in \mathbb{Z}$ ,  $mp + 3qn$  and  $mq + np$  are both integers. Therefore,

$$(m + n\sqrt{3})(p + q\sqrt{3}) \in A,$$

and  $A$  is closed under multiplication.  $\square$
